PROJECT

Amader Bazar | Live   Source Code: Front End   Back End

The project is an online store that sells various products and allows customers to browse, purchase, and track their orders. Which provides an interface for store administrators to manage products, view sales data, and track orders.

- At first, it was built with React.js, then converted into next.js 14 app router.
- Encountered data fetching issues with RTK Query and next.js cache update and revalidation
- Light and dark mode toggle with nextTheme.
- Form validated with react-hook-form and request validated with express-validator
